HAYBOSS – PRECISION HAY PRODUCTION

Variations in moisture and hay quality are major challenges for today's hay producer. Take control of your hay production with the AGCO Parts HayBoss system.

This system gives users a jump on the weather, reduces leaf shatter, and allows them to bale more hectares per day.

AGCO HayBoss Preservative eliminates the heating and deterioration caused by the growth of mould, and is safe and effective on all types of hay including alfalfa, grass, straw and other crops that are susceptible to spoilage at higher moistures.

Combat moisture and guarantee hay quality.
